

## St. David's Dental Program: Theo 2 Renovation Project

We are delighted to report that one of our oldest dental vans, Theo 2, has received a renovation thanks to a generous grant from **The Michael and Susan Dell Foundation**. A mobile clinic suffers an enormous amount of wear and tear as it makes frequent moves to new locations. The interior of a dental van can suffer additional abrasion due to dental equipment tie downs required during a move. Given that Theo 2 had been in service since 2002, it had reached the point of needing to be refurbished.

With the MSDF grant, we were able to complete the project during summer break before school started. The van was pulled out of the fleet rotation with little disruption. The upgrades began with the interior installation of

- new ceiling tiles and lighting,
- new wall and floor covering, and
- repair work to the cabinetry and counter tops.

A revision of the exterior included an

- update to the outside wrap, and
- new style logo to match the newer vans.

These improvements have put Theo 2 back in tip top shape. We have been able to increase clinical efficiency and comprehensiveness of dental services which has helped to improvement the overall effectiveness of our entire mobile dental fleet.

We hope you enjoy the before and after photographs of Theo 2 and should you want to take an on-site tour or volunteer on board, please give us a call.
